DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 24 April 2008 was filed with a request for continued examination. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

2. Further, with respect to the affidavit filed by Applicant's representative, Ms. Skolnick, Examiner respectfully disagrees with at least portions of the "statements" provided therein. With respect to the affidavit, Examiner notes the following: 1) If the IDS had been filed properly the first time, the whole situation could have been avoided; 2) The MPEP explicitly sets forth two, and only two, statements which may accompany an IDS filed after a notice of allowance; 3) Applicant filed a statement that was not one of those two statements and thus not acceptable, per the MPEP; 4) Upon consulting with Examiner's supervisor regarding the situation and possibly providing information that Ms. Skolnick had left out when she spoke with him, Examiner and Supervisor came to a consensus on how to act on the improperly, and thus unacceptably, filed IDS. They agreed that it was not within the Examiner's authority to accept such a statement. Applicant would need to file a petition as/if appropriate for such a request. This decision was explained to Ms. Skolnick. Examiner is confused as to how Ms. Skolnick came to the conclusion that the Examiner acted in a manner opposed to her supervisor's direction, as clearly Examiner does not have the authority to do so, just as she does not

have the authority to ignore the rules and regulations set forth in the MPEP that govern the patent examination process. If further clarification is needed, Applicant's representatives are invited to contact the Examiner or the Examiner's Supervisor.

Allowable Subject Matter

3. Claims 3, 5-9 and 11 are allowed.

4. The following is a statement of reasons for the indication of allowance: The prior art of record fails to teach or fairly suggest a substrate processing system comprising a plurality of first processing units that number N, each adapted to process a substrate by a first treatment with a first processing fluid, where N is a natural number not less than 3; at least one second processing unit adapted to process the substrates; a supply device adapted to generate the first processing fluid to be supplied to the first processing units, the supply device having a capacity of supplying the first processing fluid to only N-n of the first processing units simultaneously at respective supply rates; a substrate conveyor adapted to convey the substrates and to load and unload the substrates into and from the first and second processing units; and a controller that controls a timing of loading of the substrates into first processing units by the substrate conveyor, wherein the controller is configured to control the substrate conveyor so that the conveyor loads the substrates into the first processing units by turns at T/(N-n) according to a predetermined loading schedule, where in T is a time period necessary for carrying out the first treatment in each of the first processing units by using the first processing fluid, wherein the controller is configured so that if any error or abnormality

in the first treatment occurs in one of the first processing units, the controller changes the loading schedule such that the substrate conveyor loads the substrates into the first processing units other than said one of the first processing units after the error or abnormality, and the timing at which the substrate conveyor loads substrates into the first processing units is delayed after the error or abnormality occurs and wherein the controller is further configured to change the loading schedule by setting a lengthened interval only between successive loadings of substrates into two of the first processing units, while intervals between loadings of substrates into any two of the first processing units other than said two of the first processing units are kept unchanged. Further, no other properly combinable art was located that explicitly provided the missing teachings or fairly suggested the missing teachings, along with the requisite motivation for combination.
